

# Introducing Coral Reef TV

Coral Reef TV is a unique live nature streaming service designed specifically for senior living environments. There are two design functions, one as a fun activity for individual use and one as a virtual aquarium to replace actual aquariums for common area spaces. There is no other live streaming service of it's kind on the market today. Both functions are described below.

## Live Nature Streaming as a Fun Activity

Imagine keeping track of the live baby bald eagles from the Big Bear California Eagle Cam then switching with two clicks to see what sea creatures are showing up on the Lower Florida Keys Underwater Cam. Have fun trying to identify the different birds showing up on the seven live bird feeder cams we have available or watch the sea lions hang out at the Hanson Island BC Sea Lion Colony cam. With over 100 live cams available, we have it all covered. We provide a simple 10" tablet (or you can use your own) that is directly linked to the Coral Reef TV website and all controls are simple to use and the navigation is extremely easy to understand. Bring joy and fun and a real connection to live nature to the Senior environment!

## Live Nature Streaming as an Aquarium Replacement

Imagine tiger sharks from the Monterey Bay Aquarium or manta rays from the Aquarium of the Pacific in Long Beach CA swimming live in front of your eyes on a big screen TV. We have multiple live marine cams that can be changed daily and broadcast on your common area TV. Using our 10" tablet (or you can use your own) and connecting to our Coral Reef TV website, you can see all different varieties of unique marine critters. Instead of watching the same fish swim in circles in an expensive aquarium, you can now have different venues to watch interesting sea creatures from all over the world. The goal is to provide a colorful and interesting alternative to standard aquariums and to brighten up any room but without the maintenance costs or environmental hazards that are problematic with live aquariums.
